## Visualization 1:

In this visualization, I created a small multiple area chart for each country. The colors represent if they donate more or receive more (calculating by net value positive or negative), and the whole chart is sorted by the total net value over years. You can easily tell from the visualization if a country's role changes over time (from a mainly donor to a receiver), and if they have peak/valley in some years The scale is given representatively in order to make every area chart noticeable.

Visualization 2

Top 10 Reasons Changing Over Time

I created a stacked area chart in order to show the top 10 reasons' percentage of total donation over the years. I named and grouped the reasons in the dataset according to the first two digits of the reason code. And I normalized the amount into percentage to make it easier to interpret.
